INTRODUCTION

The State and Local Air Monitoring Network Plan provides the results of the annual review of the air monitoring stations in California. These stations house monitoring instruments that measure ambient levels of gaseous and particulate (solid and liquid aerosol) air pollutants. Some of the stations also collect meteorological data. The plan contains updated monitoring information about the types of ambient air quality information that the Planning and Technical Support Division of the California Air Resources Board can provide upon request (aqdweb@arb.ca.gov). The information includes the data availability for air quality and meteorological data, the location of the monitoring stations, and the type of ambient air quality monitoring performed at each monitoring station.

The purpose of the air monitoring network plan is two-fold. First, the plan confirms that the network continues to meet the State and Local Air Monitoring Stations (SLAMS) criteria established by federal regulations and that the information in the State and federal monitoring records properly classify each station. Second, the plan serves as a directory of existing SLAMS monitoring and Special Purpose Monitoring (SPM) that is performed at each site. The National Air Monitoring Station (NAMS) network and the Photochemical Assessment Monitoring Station (PAMS) network, both subsets of the SLAMS, are also identified in the report.

The NAMS, PAMS, SLAMS, and SPM monitoring stations in the state are operated by the Air Resources Board (ARB), by local Air Pollution Control Districts (APCD) or Air Quality Management Districts (AQMD), by private contractors, and by the National Parks Service (NPS). These entities operate more than 250 air monitoring stations in California. The ARB operates air monitoring stations throughout the State. Most of the local districts operate air monitoring stations within their jurisdictions. In some portions of the State, private contractors operate monitoring stations under contract with businesses that are required by permit conditions to conduct monitoring. The National Parks Service also operates a number of air monitoring stations in the National Parks and National Monuments throughout California. There are a few monitoring stations located in Tijuana, Mexicali, and Rosarito Playas, Mexico, operated by a contractor for the ARB. The locations of the stations throughout the network are presented in Table 2 and on maps that are included in this report as Figures 1 through 17, starting on page 5-1.

The geographical jurisdiction of different local districts ranges from a portion of a county to several counties. While some local districts have authority to do air monitoring in the single county within their jurisdiction (e.g., San Diego APCD), other districts have authority over more than one county (e.g., Feather River AQMD), and still other districts have authority over an entire air basin (e.g., Bay Area AQMD). Note that a number of counties lie in more than one air basin (e.g., Kern County). Also, some districts have authority to monitor only in the

portion of the county within the air basin it resides in (e.g., Northern Sonoma County APCD).

In late 1984, the ARB established statewide ambient air toxic monitoring to facilitate the identification and control of toxic air contaminants in California, pursuant to 1983 amendments to the Health and Safety Code (AB 1807, Tanner). The ARB and one local agency, the Bay Area AQMD, are conducting toxics monitoring at 36 long-term air monitoring stations in the state and one air monitoring station in Mexico. The ARB's sampling network consists of 18 stations located throughout California and the one in Mexico. In addition, the ARB at times conducts limited-term toxics sampling at a small number of sites as part of a program mandated by the California Legislature by Senate Bill 25. Some of the stations in the ARB toxics sampling network contain ARB monitoring equipment operated by local district staff. The ARB's California network consists of stations located in the San Francisco Bay Area, South Coast, San Diego, South Central Coast, Sacramento Valley, Salton Sea and San Joaquin Valley Air Basins. In addition, the 20 special purpose toxics monitoring stations operated by the Bay Area are included in this year's report. Two of those stations also include some toxics data streams for which the ARB is responsible.

The State and Local Air Monitoring Network Plan contains two tables, a map section, two appendices, and a glossary. Table 1 lists the range of years of ambient air quality and meteorology data that are available for monitors that have been active at any time between 1990 and 2005. If the ARB has not yet received PM2.5 data for a site, an 'X' is used to indicate that a PM2.5 monitor is planned to have data submitted for it at some time.

Table 2 includes several types of useful information about each monitoring site, including several attributes of each criteria pollutant monitor, the meteorological data availability, site location information, and the operating agency. (A criteria pollutant is a pollutant which has a National Ambient Air Quality Standard (NAAQS) to protect public health and welfare.) The sites included in Table 2 are those that have been in operation at some time since 1990.

The monitor information listed for the criteria pollutants includes the network designation, sampling or analysis method, spatial scale, and monitoring objective. Only monitoring methods that are considered to be reference or equivalent methods by both the U.S. EPA and the ARB are included in Table 2. For example, tapered-element oscillating microbalance (TEOM) and beta attenuation method (BAM) samplers, considered equivalent for collecting PM10 data by the U.S. EPA but not by the ARB, are not included in Table 2.

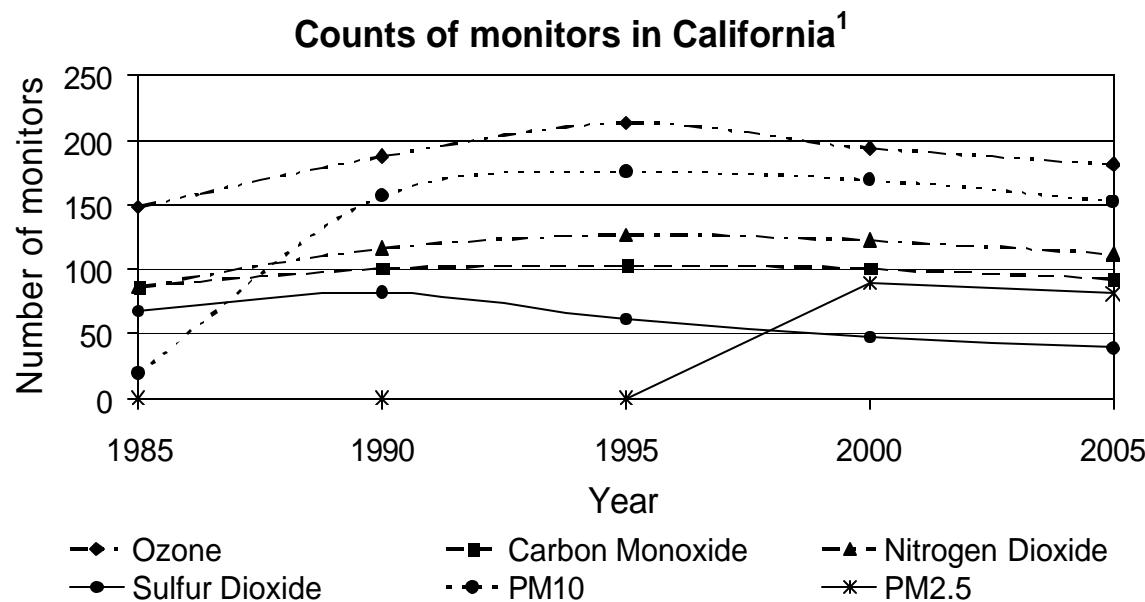

Table 2 also indicates the SLAMS and SPM air monitoring stations that collect meteorological data, and the types of data collected.

In addition, Table 2 lists the geographical locations of the monitoring sites. The locations are specified by latitudes and longitudes, as well as by elevations in meters. The elevation data have not been reviewed and are preliminary. For some sites, not all of the location information is available.

Appendix A contains lists of PM2.5, nonmethane organic, and toxic compounds for which data are available. Appendix B lists the monitoring sites that began monitoring and reporting data by mid-2005 and since we published the previous report in November 2004. Air monitoring terminology used throughout the two tables is described in the glossary under the categories of Pollutant, Meteorological Parameter, Monitor Designation, Sampling or Analysis Method, Spatial Scale, and Monitoring Objectives.

The two tables in this report are organized alphabetically by air basin. Within each air basin, the counties are arranged in alphabetical order, and within each county the monitoring sites are also arranged in alphabetical order. The map section is also arranged alphabetically by air basin. For quick referencing between Tables 1 and 2, information for the same site can be located on respective pages within Table 1 and Table 2. For example, a site listed in Table 1 on page 3-17 will be listed in Table 2 on page 4-17.

The graph below shows the change in the number of sites monitoring each of the federal criteria pollutants over the last 20 years.

¹. For the six pollutants with federal ambient air quality standards.

(This page intentionally left blank)

MONITORING OBJECTIVES AND SPATIAL SCALES

Federal regulations indicate that a minimum of four monitoring objectives should be met in establishing a SLAMS network. The network is to have stations that monitor: (1) the highest pollutant concentrations; (2) the representative concentrations in areas of high population density; (3) the impact of major pollution emissions sources; and (4) the general background concentration levels.

The physical siting of the air monitoring station must achieve a spatial scale of representativeness that is consistent with the monitoring objective. The spatial scale results from the physical location of the site with respect to the pollutant sources and categories. It estimates the size of the area surrounding the monitoring site that experiences uniform pollutant concentrations.

The categories of spatial scale are:

- Microscale - An area of uniform pollutant concentrations ranging from several meters up to 100 meters.
- Middle Scale - Uniform pollutant concentrations in an area of about 100 meters to 0.5 kilometer.
- Neighborhood Scale - An area with dimensions in the 0.5 to 4.0 kilometer range.
- Urban Scale - Citywide pollutant conditions with dimensions ranging from 4 to 50 kilometers.
- Regional Scale - An entire rural area of the same general geography (this area ranges from tens to hundreds of kilometers).

Monitoring objectives and associated spatial scales are summarized in the table below.

Monitoring Objective	Appropriate Spatial Scale
Highest concentration or source impact	Micro, Middle, Neighborhood, or Urban*
High population densities, representative concentration	Middle, Neighborhood, or Urban
Background levels	Neighborhood or Regional

* Less frequently

APPENDIX A

Speciated Compounds

This appendix lists chemical species measured from the NMOC, PM2.5, and toxics monitoring programs. You can use this appendix to determine the corresponding AIRS parameter code. For information on which sites monitor for speciated NMOC, PM2.5, or toxics data, see Table 1, "Air Quality Monitoring Data Availability".

	Compound Name	AIRS Parameter Code
NMOC		
	1,2,3-Trimethbenzene	45225
	1,2,4-Trimethbenzene	45208
	1,3,5-Trimethbenzene	45207
	1,3-Butadiene	43218
	1-Butene	43280
	1-Pentene	43224
	2,2,3-Trimethylbutane	43392
	2,2,4-Trimethylpentane	43250
	2,2-Dimethylbutane	43244
	2,3,4-Trimethylpentane	43252
	2,3-Dimethylbutane	43284
	2,3-Dimethylpentane	43291
	2,4-Dimethylpentane	43247
	2,5-Dimethylhexane	43955
	2-Methyl-1-Pentene	43246
	2-Methyl-2-Butene	43228
	2-Methylbutane	43221
	2-Methylheptane	43960
	2-Methylhexane	43263
	2-Methylpentane	43285
	3-Ethylhexane	43295
	3-Methylbutene	43282
	3-Methylheptane	43253
	3-Methylhexane	43249
	3-Methylpentane	43230
	4-Mpentene/3-Mpentene	43391
	Benzene	45201
	Butane	43212

Compound Name	AIRS Parameter Code
c-1,3-Dimethylpentane	43393
c-2-Butene	43217
c-2-Hexene	43290
c-2-Pentene	43227
Cyclohexane	43248
Cyclopentane	43242
Cyclopentene	43283
Decane	43238
Ethane	43202
Ethene	43203
Ethylbenzene	45203
Ethyne	43206
Heptane	43232
Hexane	43231
Iso-Propylbenzene	45210
Isobutane	43214
Isobutene	43270
Isoprene	43243
m-Diethylbenzene	45218
m-Ethyltoluene	45212
m/p-Xylene	45109
Methylcyclohexane	43261
Methylcyclopentane	43262
n-Propylbenzene	45209
n-Undecane	43954
Nonane	43235
o-Ethyltoluene	45211
o-Xylene	45204
Octane	43233
p-Diethylbenzene	45219
p-Ethyltoluene	45213
Pentane	43220
Propane	43204
Propene	43205
Styrene	45220
t-1,3-Dimethylpentane	43394

Compound Name	AIRS Parameter Code
t-2-Butene	43216
t-2-Hexene	43289
t-2-Pentene	43226
Toluene	45202

There are also two totals:	
Total nonmethane organic compounds	43102
Sum of the PAMs target compounds	43000

Compound Name	AIRS Parameter Code
PM2.5*	
Aluminum PM2.5	88104
Ammonium Ion PM2.5	88301

APPENDIX B

New Sites for 2005

This appendix lists monitoring sites which have begun submitting data by mid-2005 and since we published the previous report in November 2004. More information for these sites can be found in Table 1 and Table 2.

Site Name	Basin Name	County Name
LAWS-Joe Smith Road	Great Basin Valleys	Inyo
Mountain View-Whisman Park	San Francisco Bay Area	Santa Clara
South Lake Tahoe-Airport	Lake Tahoe	El Dorado

GLOSSARY

California Air Quality Monitoring

Pollutant

CH4	Methane monitored by continuous analyzer.
CO	Carbon monoxide
COH	AISI Tape Sampler for Soiling Index (Coefficient of Haze)
H2S	Hydrogen sulfide
Light Scat	Light scatter monitored with nephelometer.
Met	Meteorological data
NMHC	Nonmethane hydrocarbons (total) collected in continuous monitors.
NMOC	Nonmethane hydrocarbons (speciated) collected in canisters. These are either 3-hour or 24-hour samples.
NO2	Nitrogen dioxide
Ozone	Ozone
PM10	Particulate matter with an aerodynamic diameter less than or equal to a nominal 10 micrometers. Collected using high volume samplers with size selective inlets.
PM10 Carbon	PM10 samples collected with high volume size selective inlet samplers and analyzed for total carbon.
PM10 Contin.	Continuous PM10 monitors that collect measurements hourly.
PM10 Ion	PM10 samples collected with high volume size selective inlet samplers and analyzed for sulfate, nitrate, chloride, ammonium, and/or potassium.
PM2.5	Particulate matter with an aerodynamic diameter less than or equal to a nominal 2.5 micrometers. Collected using low volume single channel or sequential samplers with size selective inlets.
PM2.5 BAM	Beta Attenuation Monitor collecting PM2.5 mass measurements hourly.
PM2.5 Spec.	PM2.5 Speciation includes 24-hour (filter-based) speciation monitors. Most of the 24-hour speciation monitors are Spiral Aerosol Speciation Samplers (SASS)
SO2	Sulfur dioxide
THC	Total hydrocarbons monitored by continuous analyzer.
Toxics	Toxic air contaminants which include gaseous and particulate compounds sampled and analyzed using a variety of methods. These are typically 24-hour-average samples.
TSP	Total suspended particulate matter mass sampled from high volume samplers without the size selective inlet.
TSP Lead	Total suspended particulate samples that are analyzed for lead.
TSP NO3	Total suspended particulate samples that are analyzed for the nitrates fraction.
TSP SO4	Total suspended particulate samplers that are analyzed for the sulfates fraction.

Meteorological Parameter

DPT	Dew point temperature
Press	Barometric pressure
RH	Relative humidity

GLOSSARY

California Air Quality Monitoring

SOL	Total solar radiation
Temp	Ambient air temperature
UV	Ultraviolet radiation
VWS	Vertical wind speed
WD	Wind direction
WS	Wind speed.

Monitor Designation

N	National Air Monitoring Stations (NAMS)
P	Photochemical Assessment Monitoring Stations (PAMS)
S	State and Local Air Monitoring Stations (SLAMS)
SP	Special Purpose Monitoring (SPM)

Sampling or Analysis Method

AG	Atomic absorption - Graphite oven from high volume sampler
CL	Chemiluminescent
CM	Colormetric
CND	Conductimetric
ESI	Emission spectrometry ICAP (Inductively Coupled Argon Plasma)
FL	Fluorescence
FP	Flame photometric
GC	Gas chromatography
IPMS	Inductively Coupled Plasma-Mass Spectrometer
IR	Nondispersive infrared
N/A	Not available
SCH	Low volume single channel sampler, size selective inlet
SI	High volume sampler, size selective inlet
SQ	Low volume sequential sampler, size selective inlet
UV	Ultraviolet absorption
XG	X-ray fluorescence

Spatial Scale

MI	Microscale
MS	Middle scale

GLOSSARY
